RESEARCH PROJECTS*

October 2021-

Co-investigator of CoastVision- Computer vision to expand monitoring and accelerate assessment of coastal fish project

Funded by Research Council of Norway (Total Budget: ~1.2M €)

CoastVision uses the power of deep learning to refine and extend a computer vision pipeline for detecting, classifying and sizing the key fish species in shallow water coastal ecosystems, facilitating a transition to fully automated video analysis. Computer vision for re-identifying individuals solely based on their unique visible features is also developed.
